LUPROMAX-ASC[®]

LEAD FREE High Temperature Anti-Seize Compound

DESCRIPTION

LUPROMAX-A.S.C. is a metallic copper high temperatures and extreme pressure grease made from a high VI olefinic copolymer and a finely divided thickener. This grease is fortified with additives that provide it with excellent lubricating properties, stability and anti-wear capabilities.

LUPROMAX-A.S.C. is formulated for industrial use where a multi-use product will save time and money.

PERFORMANCE CHARACTERISTICS

- **LUPROMAX-A. S. C.** is a non-gumming, non-petroleum base grease. It has no dropping point, so it will not run out of threads when heated. It sticks to the metal threads and lets joints in pipe or nuts on bolts or studs make up with less torque.
- **LUPROMAX- A. S. C.** is also a high-temperature anti-friction bearing lubricant that functions in high-speed use to 450°C. From 600 through 2100 degree F, it functions as a dry-film lubricant for heavy load and slow speed use - such as in slides or slow-revolution equipment, with the molybdenum actually plating out to prevent metal-to-metal contact and surface scuffing. It also provides reliable lubrication in boundary conditions.
- **LUPROMAX- A. S. C.** when operated at high temperatures for a prolonged time interval will need to be reapplied more frequently than when operated at lower temperatures.
